

Dell Inspirion N4050 laptop hard drive replacement

Replacing the hard drive on this Dell Inspiron N4050 laptop

Written By: Marcos Mora

INTRODUCTION

Here I show how to dismantle a client's Dell Inspirion N4050 laptop to replace their damaged hard drive for a new one

TOOLS:

۶

• New Item (1)

Step 1 — Removing the battery part 1

- Check your laptop model
- Turn it over to work on the bottom of the laptop
- Open the first latch for the battery

Step 2 — Remove the battery part 2

- Open the second latch in the direction that the arrow is pointing. This requires more effort than the first one.
- The battery will come out a little. Finish removing it gently.

Step 3 — Remove the bottom screws

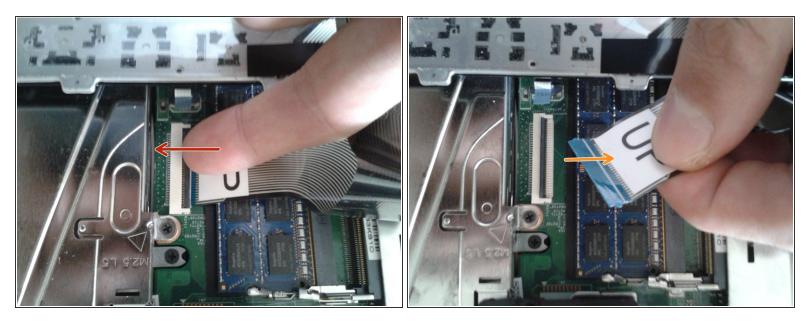

- Remove the 8 screws.
- Use a Phillips 0 screwdriver.

Step 4 — Removing the keyboard part 1

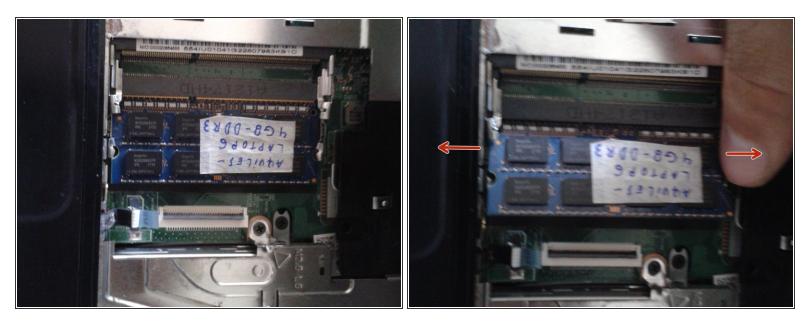

- Turn the laptop with the keyboard facing up.
- Use a flat-blade screwdriver to separate the keyboard from the computer case.
- Tilt the keyboard as shown in the image. Do not remove it completely because it is connected to a cable.

Step 5 — Remove the cable that connects the keyboard to the motherboard

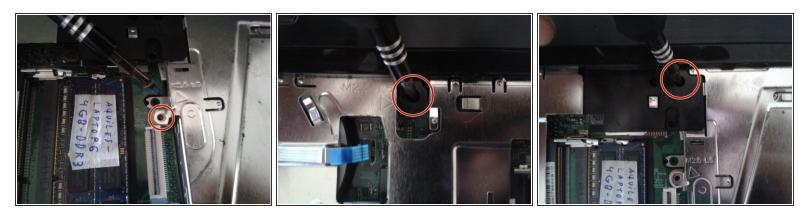

- Remove the clip that holds the cable to the motherboard.
- Remove the cable.

Step 6 — Remove the RAM

 Remove the memory cards by moving the retaining clips in the direction that the arrows are pointing.

Step 7 — Remove the screws

• Remove the 3 screws.

Step 8 — Remove the small cables

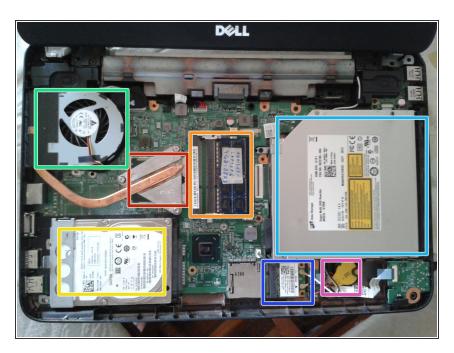

• Remove the 2 small cables.

Step 9

• Use a plastic tool to separate the top of the laptop.

Step 10 — Internal parts of the laptop

- CPU
- DDR3 RAM memory, 2 slots avaiable
- SATA hard disc
- Heatsink
- DVD unit
- Wireless network card
- Battery for the internal clock

Step 11 — Hard Drive

- The hard disc does not have this support to the mother board from the factory. It is only attached by the SATA connector.
- Height is 8.5 mm

To reassemble your device, follow these instructions in reverse.
