

Samsung ATIV Book 9 Lite Battery Replacement

A step-by-step replacement guide for the Samsung ATIV Book 9 Lite's battery.

Written By: Phat Tran

INTRODUCTION

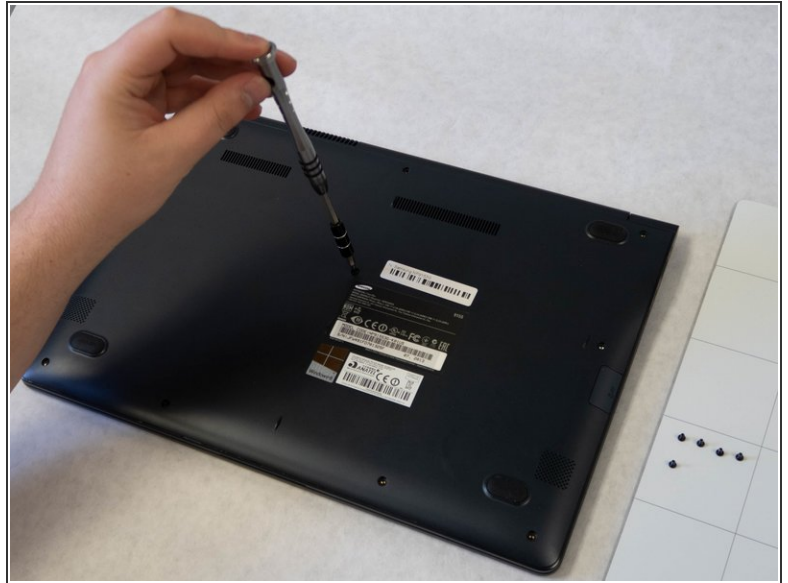

This guide may be used to remove the battery from the Samsung ATIV Book 9 Lite for replacement. Have a Phillips screw driver ready. Be sure to keep track of all screws removed and where they belong. Dispose of the broken battery properly.

TOOLS:

Step 1 — Battery

 Put a protective lining such as a piece of cloth in between the screen and the keyboard when closed to protect your screen when performing this replacement.

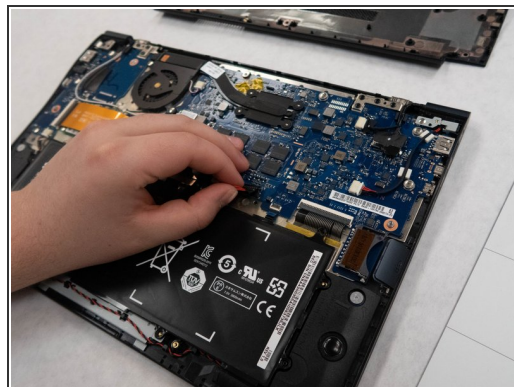

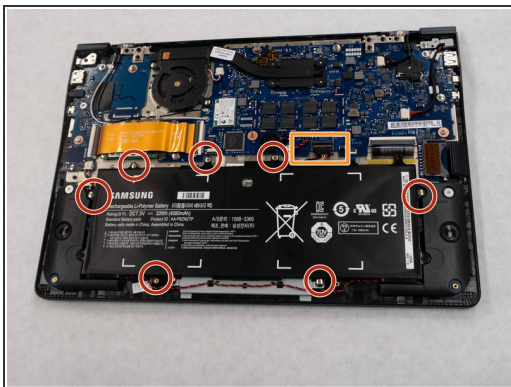

- Turn the laptop upside down to show the screws holding the back cover on.
- Using a Phillips #0, remove the ten 4mm screws located around the edges and one central.

Step 2

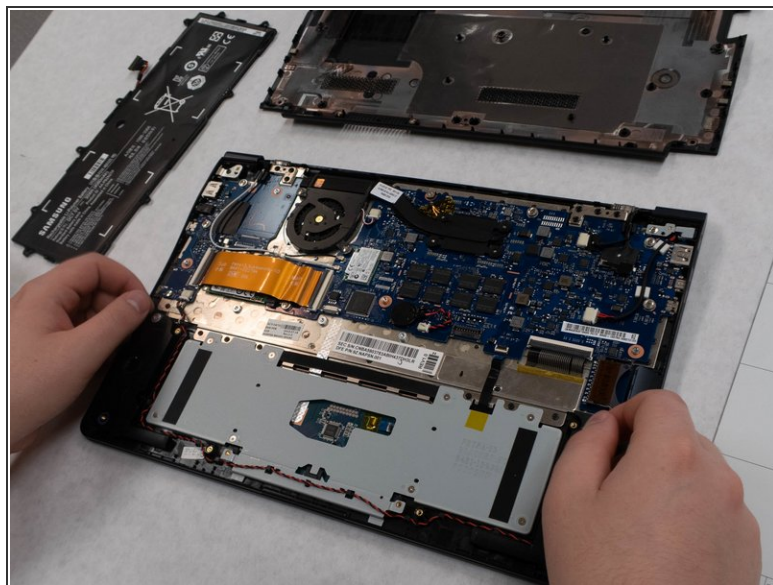

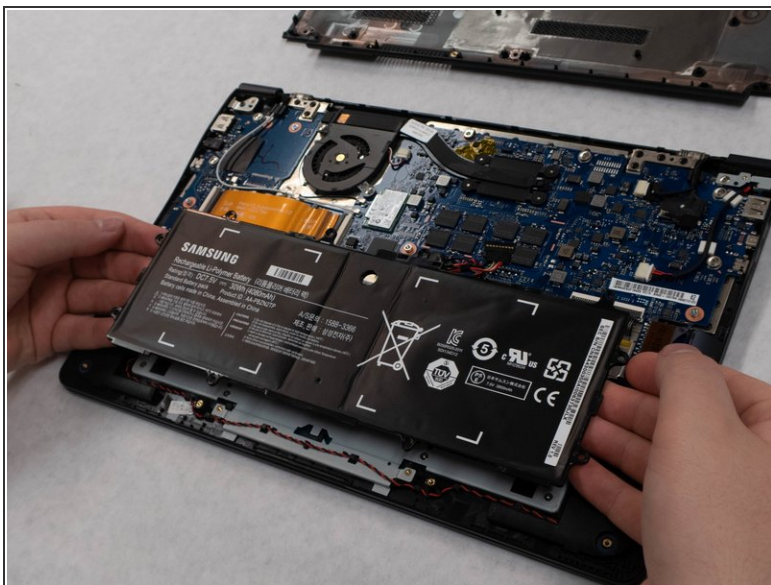

- Use two plastic opening tools to separate the back cover from the laptop.
-  This may take some force because the back cover is snapped into place before the screws are used to keep it in place.

Step 3

- Using a Phillips #0, remove the seven 5mm screws highlighted in the image.
- Using your hands, disconnect the battery's main cord from the main motherboard.

Step 4

- Using your hands remove the battery from the computer.

To reassemble your device, follow these instructions in reverse order.
