Step 10

● Using the J0 Japanese Industrial Standard screwdriver, remove the 3.5mm screw from the chip connected to the USB ports.
Step 11

⚠ Using the tweezers, gently pry up the chip and ports, and unthread the wire from its holders, without crimping the wires.
Step 12

- Using the J0 Japanese Industrial Standard screwdriver, remove the 4.5mm screw holding down the chip next to the power prongs where the battery connects.

- Gently pull the chip from its connector.

Step 13

⚠ Gently pull up the aluminum strip from the top right corner of the computer and unthread the wire from the holders using the tweezers, without crimping the wire or tearing the aluminum.

Step 14

- Disconnect the wire screen connection from its port by pulling upwards.
Step 15

- Gently pull up the speaker towers from either end of the computer.

Step 16

- Using the blunt tweezers, unthread the wires that connect the motherboard to the speakers from their holders, without crimping the wires.
Step 17

- Using the iFixit opening tool, gently pry up the plastic clasp that holds the keyboard power circuit down, and pull out the strip from the connection.

Step 20 — AC DC Powerjack

- Locate the power jack on the corner of the motherboard.

- Locate the four connectors that hold the power jack to the motherboard.

Step 21
- Using the Soldering Station, remove the power jack from the four connectors.

Step 22

📌 Solder the new power jack in place by reattaching the four connectors.

After soldering the new power jack in place, reassemble your device by following these instructions in reverse order.
