-

Step 1 — Hard Drive

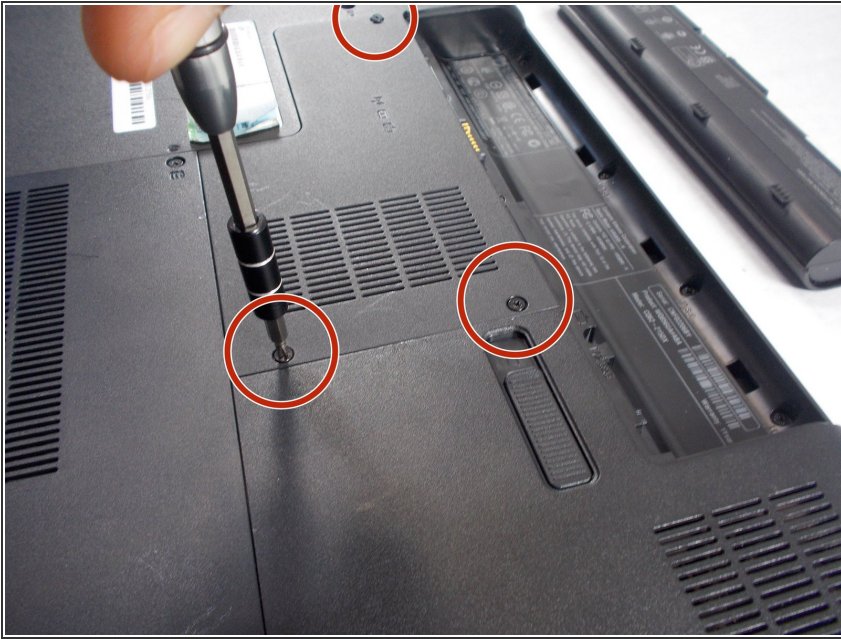

- First you will need to turn the laptop upside down.

Step 2

- Remove the battery by pushing the switch to the left and removing the battery from its slot.

Step 3

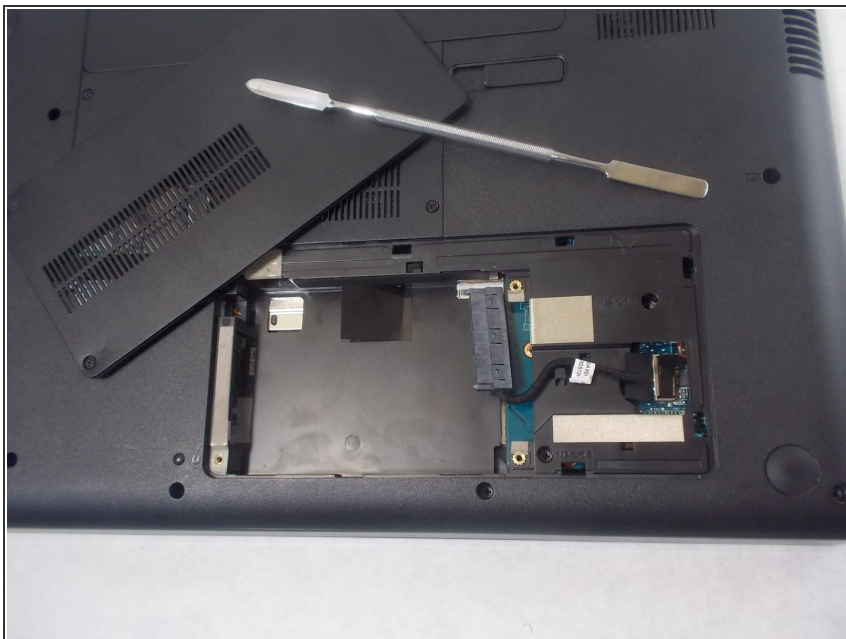

- Unscrew the three 3mm screws on the compartment underneath the battery.

Step 4

- Use a Phillips screwdriver to remove the two 3mm screws on the lowest compartment.

Step 5

- Use a Metal Spudger remove the panel. Underneath is where the hard drive is connected .

Step 6

- This is where you detach your old hard drive and replace with the new component.

To reassemble your device, follow these instructions in reverse order.
