

Toshiba Satellite C855D-S5109 Battery Replacement

How to replace a battery in a Toshiba Satellite C855D-S5109 laptop.

Written By: Danny Meier

INTRODUCTION

If your Toshiba Satellite laptop (model C855D-S5109) is having trouble charging or holding a charge, use this guide to walk you through the steps to replace the battery.

Laptop batteries typically have a lifespan of 2 to 4 years and will gradually lose their ability to hold a charge over time. An older laptop battery will not be able to power the laptop as long as it used to, and it may even lose its ability to charge overall. Additionally, if a battery has been damaged, it may become very hot when it charges and it should be replaced.

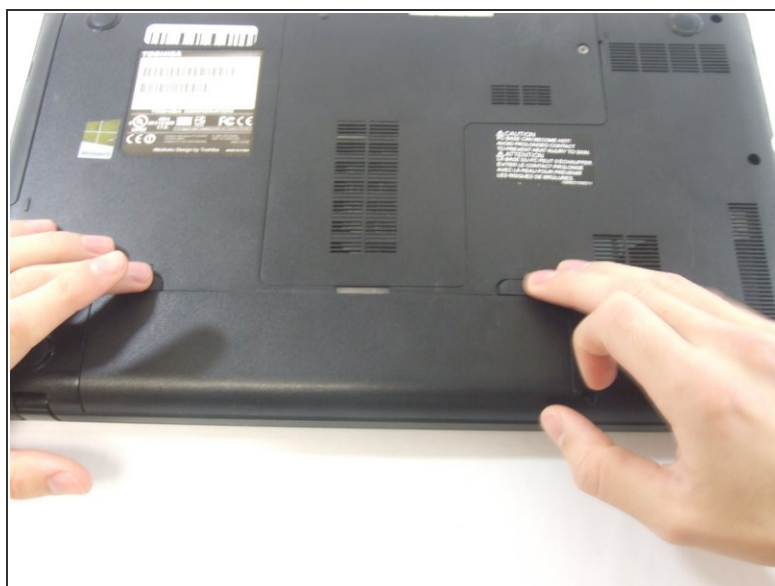

No special tools or prior knowledge are required for this replacement. Before beginning this guide, make sure to power off your laptop completely and disconnect it from any power sources.

Step 1 — Battery

- Flip the laptop over so the bottom is facing up.

Step 2

- Slide the two lock tabs on the battery to the open position.

Step 3

- While still holding the lock tabs outward, use your hand to grab the top of battery and pull up.
- Remove the battery.

To reassemble your device, follow these instructions in reverse order.
