

MacBook Air 13" Retina Display 2020 Smaller Keys Replacement

This guide discusses replacing a Macbook Air 13" 2020 smaller key that may have popped off.

Written By: Brianna Kwiecinski

INTRODUCTION

Keyboard keys are the most handled part of a laptop, besides maybe the trackpad. This being said, it is very common for keys to pop off of the keyboard.

Smaller keys are some of the most important keys. Not only your F1-12 keys, but your arrow keys, too.

Before beginning, make sure you have all of your pieces handy. This is anything that may have fallen off when the key itself did. Oftentimes keys fall off after the laptop has been dropped or mishandled.

TOOLS:

- [Microfiber Cleaning Cloths](#) (1)

Use your preferred method to clean your keyboard.

- [ESD Safe Tweezers Blunt Nose](#) (1)

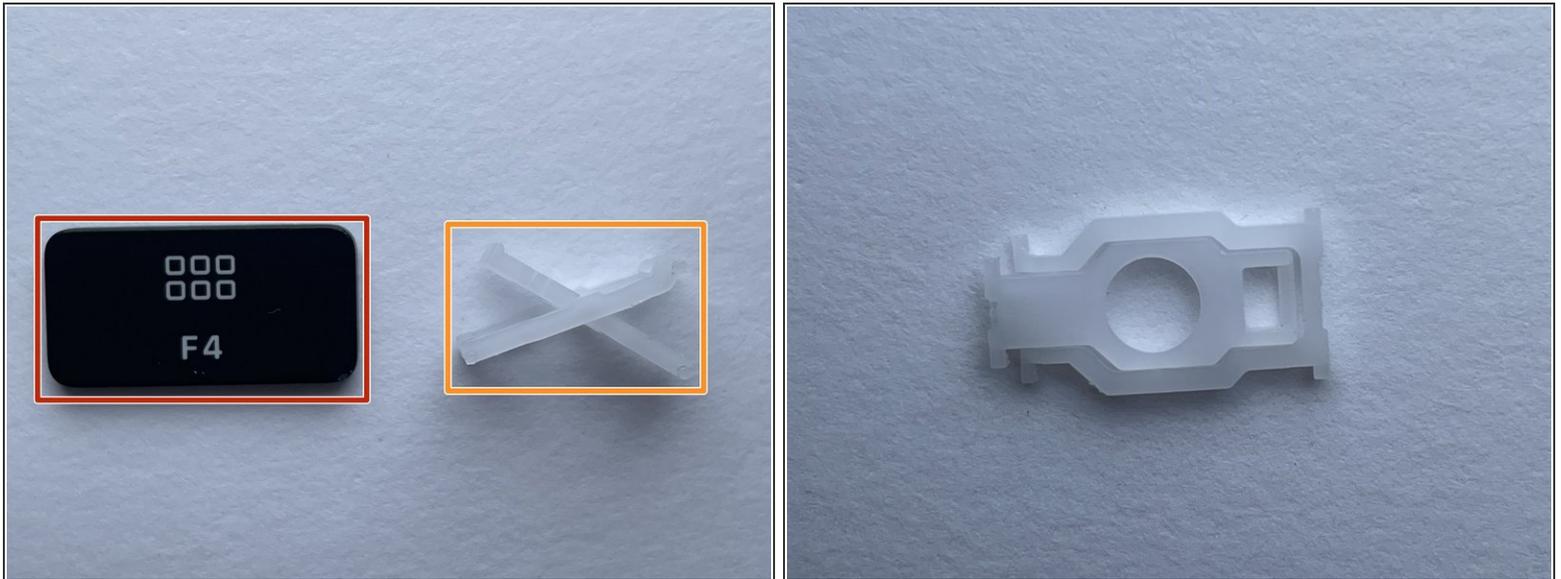

This is for handling the small pieces. You can use your hands if that is easier for you.

Step 1 — Smaller Keys

- Clean the keyboard.

Step 2

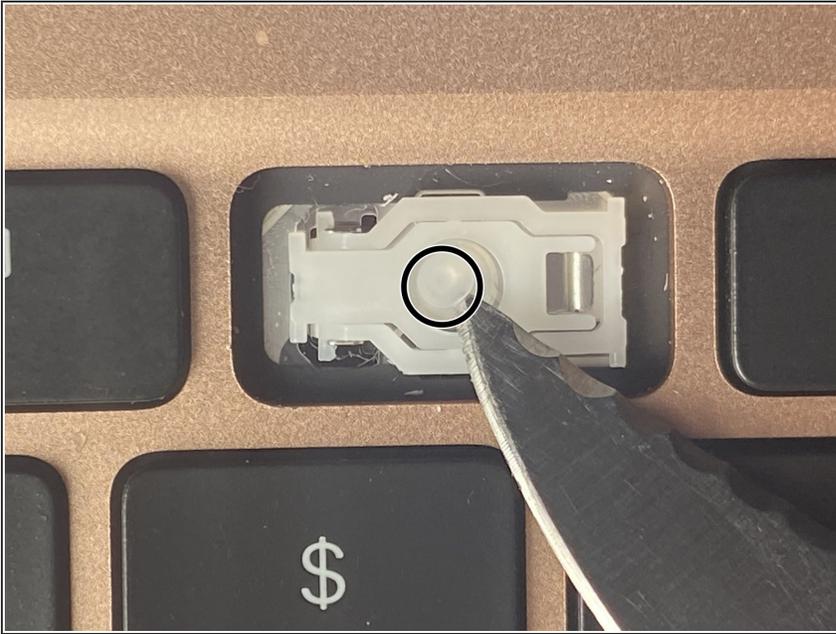

- Gather all necessary pieces that may have come off with the key.
 - The key itself.
 - The hinge piece.
- Orient the hinge piece in the proper position.

Step 3

- Install onto single mount first.
- Then press into the double mount.
- ⓘ Make sure the hinge is in place properly, or the key will not stay on.

Step 4

i This piece, the rubber cap, doesn't come off often. But if it does, you can reinstall it by pressing down on the middle.

Step 5

- Orient the key in the proper position.

Step 6

- Press the key down into place.

To disassemble your device, follow these instructions in reverse order.
