

2001-2005 Honda Civic Battery Replacement

How to replace a dead battery.

Written By: Tyler Smith

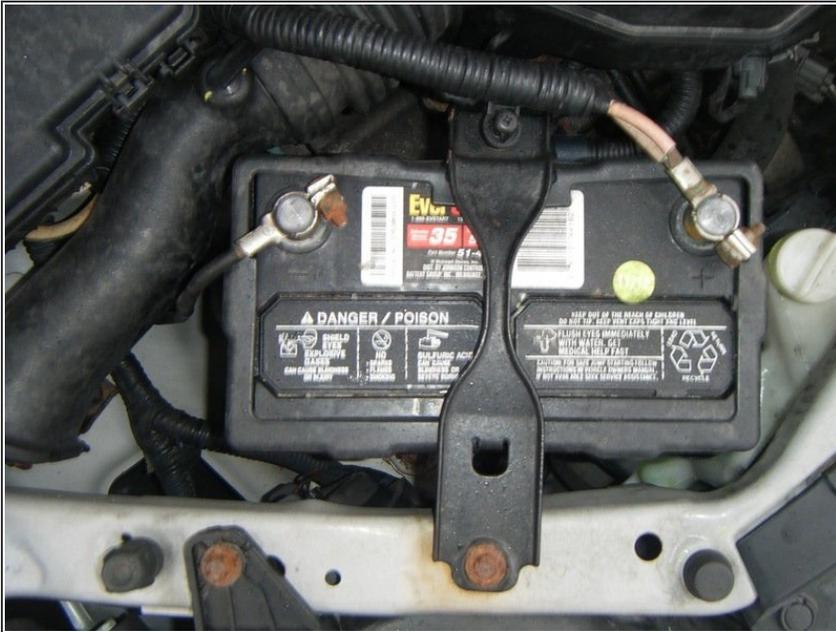

INTRODUCTION

Follow this guide to remove and replace the lead acid battery for a Honda Civic.

TOOLS:

- [Socket Wrench](#) (1)
-

Step 1 — Battery

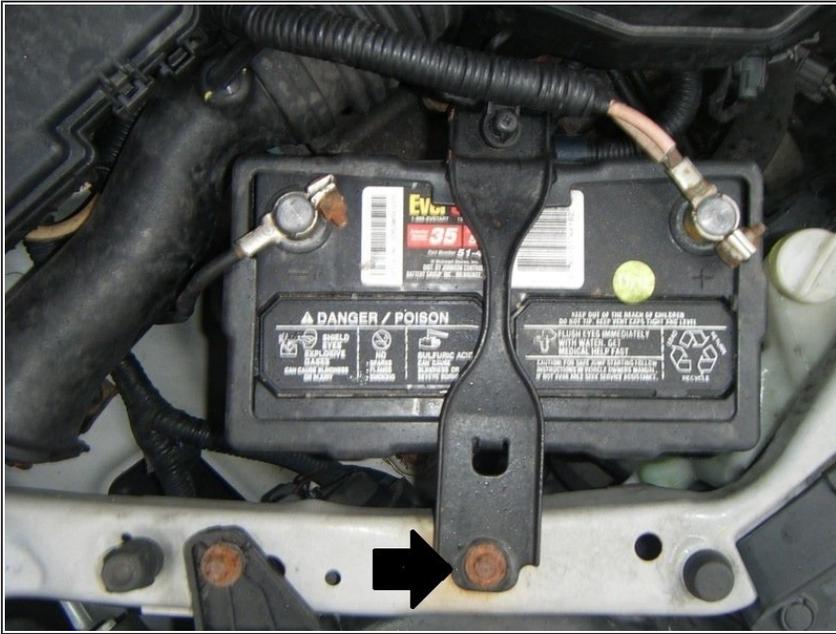

- ⚠ Caution! Vehicle must be turned off before attempting this replacement. Touching the battery terminals while the car is running may cause risk of electrocution.

Step 2

- Remove the connections from both the negative and the positive terminals of the battery
- ⚠ When removing the battery, the negative terminal must be removed first. When re-installing the battery, the positive must be connected first.

Step 3

- Using a socket wrench, remove the battery bracket from the top of the battery.
- ⓘ Depending on the condition of the car, the bolts may be rusted, making the removal of them a challenge.

Step 4

- ⚠ Ensure that there are no connections remaining on the battery.
- Lift up the battery and remove it from the battery tray.

To reassemble your device, follow these instructions in reverse order.
