

# Canon PowerShot SD780 IS Flash Capacitor Replacement

This replacement guide will show you how to...

Written By: Arlene Ale

## INTRODUCTION

This replacement guide will show you how to access the flash capacitor of the Canon Powershot SD780 IS.

**Be extremely careful** in dealing with the capacitor as it can store a large electrical charge for a long period of time. The safest way to handle a capacitor is by discharging it. You can make a capacitor discharge tool by following the [Constructing a Capacitor Discharge Tool](#) guide.

### TOOLS:

[Phillips #00 Screwdriver](#) (1)

[Spudger](#) (1)

[Magnetic Project Mat](#) (1)

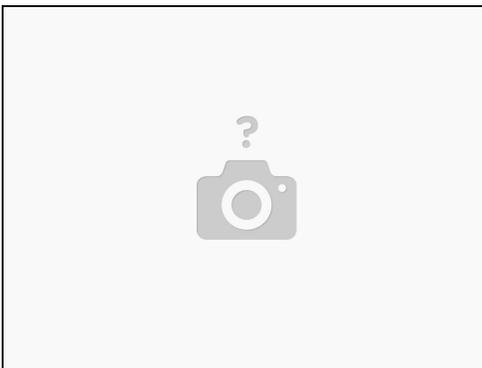

*Optional For Keeping Track of Screws*

[Anti-Static Project Tray](#) (1)

*Optional For Keeping Track of Screws*

---

## Step 1 — Flash Capacitor

 **Begin by making sure the camera is turned off and the battery has been removed to avoid any shock injuries.**

## Step 2

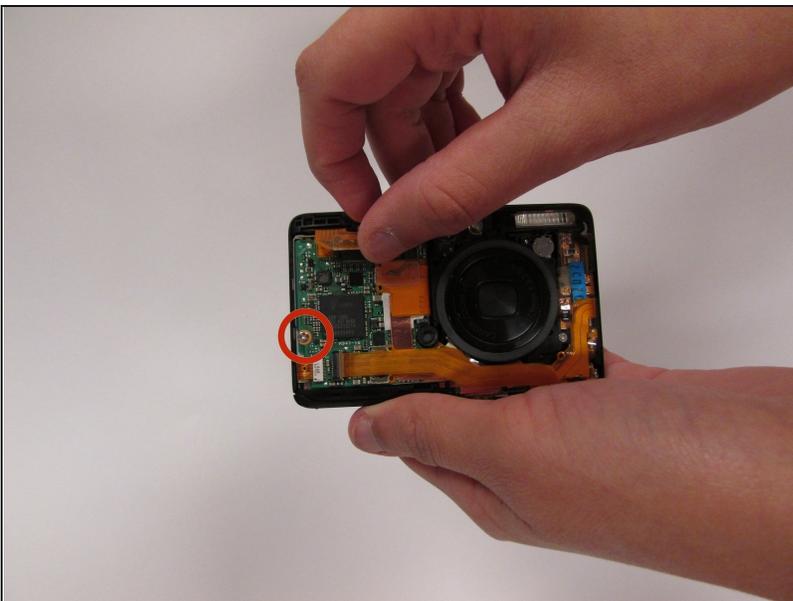

- Having removed the battery, you can begin removing the outermost screws on the camera to allow for case replacement. There are 5 screws in total. This will require a Philips head # 00 screwdriver.
- ☑ Keep track of where each screw came from in order to avoid complications during the reassemble process.
- ⓘ The screws highlighted by the red square in the second image (on the left side in the first image) are 2.0 mm long.

### Step 3

- Remove the front panel of the camera case to expose the top left copper strip, and gently pull the strip upward to disconnect from camera.

### Step 4

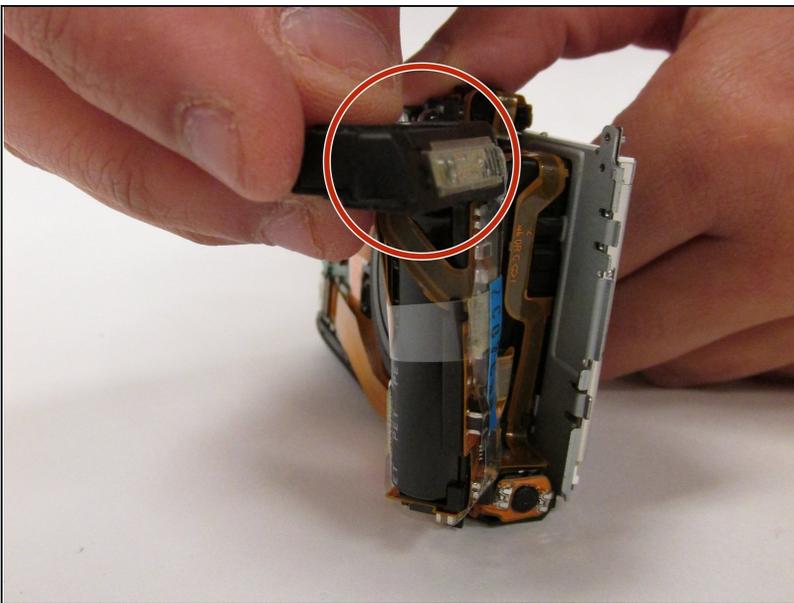

- Remove the screw on the far left hand side of the camera.

## Step 5

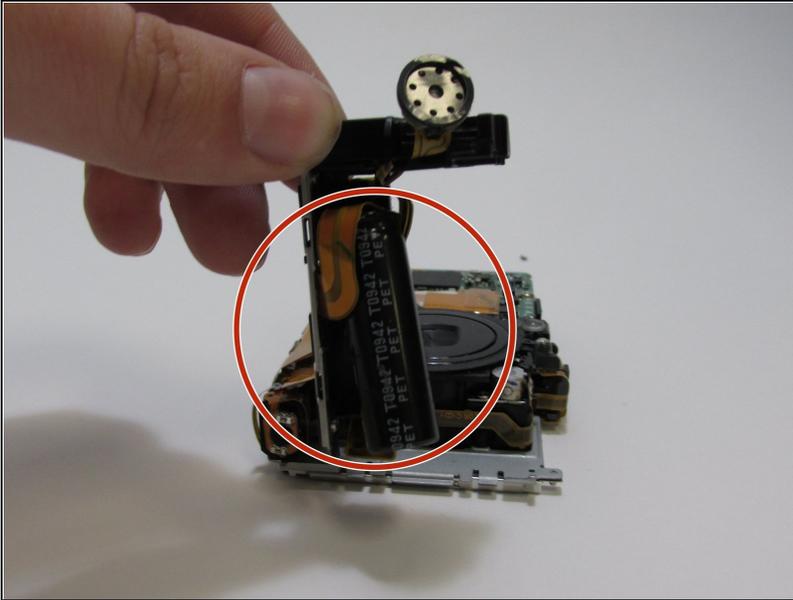

- Now that you have removed all of the screws, carefully pull the case apart at the seam. The case will detach from the camera in two pieces.

## Step 6

- Locate the image stabilizer on the top right of the camera and pry the internal battery away from the camera. Having done this, the internal battery can be removed easily.

## Step 7

- You have now exposed the internal battery, and you may proceed to exchange the old internal battery for a new one.

---

To reassemble your device, follow these instructions in reverse order.
