## Step 1 — Hard Drive

- Flip your computer over, so that the underside of your computer is facing upward.

  ⚠ Make sure your computer is powered down and unplugged from the charger before removing any components.

- Locate the hard drive casing on the bottom-right corner of your flipped computer.

- Remove the two 3.8mm screws with your Phillips #00 Screwdriver and carefully lift up and remove the hard drive casing.

  ⓘ Screws on hard drive casing will remain in casing after being unscrewed.

## Step 2

- After you lift off the hard drive casing, using your [Phillips #000 Screwdriver](#), remove the two 3.6mm screws located on the right side of the hard drive.

- Using your fingers, carefully lift the lower right corner of your hard drive until it is removed from its housing.

To reassemble your device, follow these instructions in reverse order.
