Step 1 — Screen

- Make sure to open the back cover easily using the plastic opening tool

Step 2

- Remove back cover by prying away from the Kurio.

- ⓘ The easiest place to remove the cover is from the bottom and top; try to open it from right to left sides.
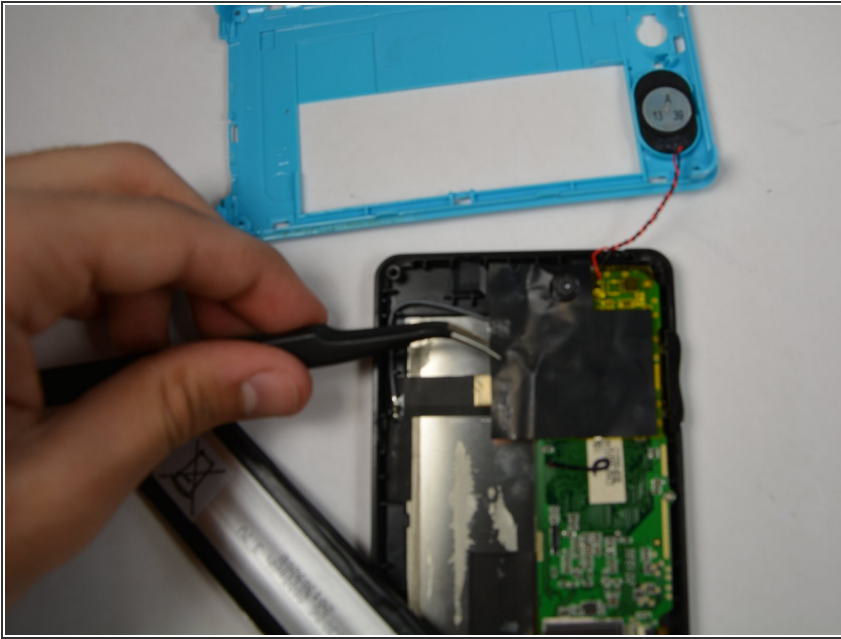

Step 3

- To remove the battery, make sure the four 5mm Philips screws on each side of your device is open using the Philips#1 Screwdriver.

Step 4

- After you remove your four 5mm Phillips screws, use your plastic opening tool to help you open the plastic cover of your device.

- ⓘ All these screws are identical so don't worry if you get them out of order.

Step 5

- Remove the plastic cover that is covering the camera area.

Step 6

- Separate the two halves of your Kurio Touch 4S and lay them besides each other.

Step 11

- Remove the motherboard with the help of plastic opener.

- ⓘ Detach the power plug before you remove the motherboard.

Step 12

- Use the Plastic opener to remove the screen.

- ⚠ Do not apply too much pressure as the front cover could be damaged.

Step 13

- Use the soldering tool to remove the wire that is attached to the screen & the motherboard.

Step 14

- Use tweezers to remove the screen from your Kurio Toich 4S.

To reassemble your device, follow these instructions in reverse order.
