INTRODUCTION

Use this guide to replace the battery in your Amazon Fire Phone.

TOOLS:

- [iFixit Opening Tool](#) (1)
- [Suction Handle](#) (1)
- [T3 Torx Screwdriver](#) (1)
- [Anti-Static Project Tray](#) (1)
- [iFixit Opening Picks \(Set of 6\)](#) (1)

Step 1 — Tape the screen

-  If the display is damaged, use clear packing tape to contain any glass shards.
-  Make sure the entire surface of the display is covered with tape.
-  **Wear safety glasses to protect your eyes.**

Step 2 — Power off, remove SIM card, remove screws

- Power off your phone.
- Remove the SIM card from the left side of the phone by pressing the small hole and allowing it to eject using the 0.8 screwdriver head.
- Remove the two 4mm screws on the bottom of the phone using the Torx T3 screwdriver.

Step 3

- Press the small suction cup just above the home button.
- While lifting up on the suction cup insert an opening pick into the crevice between the screen and back casing to pry the screen off carefully.

⚠ Carefully separate the two halves to avoid tearing the volume rocker ribbon cable.

- Using the opening tool, disconnect the volume rocker ribbon cable from the base of the phone freeing the two halves of the phone.

Step 4 — Remove Bracket

- Using the J000 screwdriver head, remove the three 3mm screws holding the bracket in place.
- Remove the silver bracket that was held into place by the three screws just removed.

Step 5 — Disconnect Battery

- Disconnect the battery connection cable by using the plastic opening tool and applying light pressure upwards on the cable.

To reassemble your device, follow these instructions in reverse order.
