INTRODUCTION

This guide will take you through the steps to replace the motherboard or the zoom lens. Both parts follow the same process until the very last step.

## 🔧 TOOLS:

- iFixit Opening Tools (1)
- Phillips #000 Screwdriver (1)
Step 1 — Lens or Motherboard

- Gather your camera and tools. Also make sure that the battery is removed before proceeding.

- Follow battery replacement guide through step three to remove the battery.

Step 2

- Remove all seven 4 millimeter long screws using the PH000 screwdriver bit.

Step 3

- Use plastic opening tool to remove the cover on the non-lens side of the camera.

Step 4

- Open the battery compartment and remove the 2 screws. Also remove the screw from the bottom of the camera after pulling off the white sticker concealing it. Removing these screws releases the bottom of the display assembly.

- Starting at the non-lens side of the camera, use plastic opening tool to pry screen away from main housing on all sides.

Step 5

- Use plastic opening tool to pull connector away from motherboard.

- Remove screen completely and set aside.

Step 6

- Using the plastic opening tool, disconnect the three connectors from the motherboard.

Step 7

- Remove the three 3.5 mm long screws (red circle markers) using the PH000 screwdriver bit.

- Remove the four 2 mm long screws (orange circle markers) using the PH000 screwdriver bit.

Step 8

- Remove the three 3 mm long screws connecting the lens unit to the main housing using the PH000 screwdriver bit.

- Carefully remove the lens and motherboard from main housing.

Step 9

- Remove stickers off of connectors.

- Open latch door on connectors.

- Separate lens from motherboard.

- Now you may replace either motherboard or lens with new part.

To reassemble your device, follow these instructions in reverse order.
