Amazon Fire HD 10 Battery Replacement

Before you begin, make sure the device is off....

Written By: Jaie Hillery

INTRODUCTION

Before you begin, make sure the device is off. You will need to use the screen replacement guide as a prerequisite.

🔧 **TOOLS:**

iFixit Opening Tool (1)
Spudger (1)

⚙️ **PARTS:**

Amazon Fire HD 10 (5th Gen) Battery (1)

Step 1 — Screen

⚠️ Avoid prying near bottom right hand side due to LCD Connector

- Use a plastic opening tool to pry the screen up in the right hand corner.

Step 2

⚠ Do not completely remove the screen yet as there is a ZIF connector connected.

- Lift the screen and digitizer from the case.

ⓘ You may need to use some force due to the glue.

Step 3

ⓘ Be mindful of the ZIF connector.

- Disconnect the ribbon connector from the digitizer side using your hands or the plastic opening tool.

Step 4

- Remove the screen and digitizer from the case completely.

Step 5 — Battery

- Locate the power cable that links the battery to the motherboard.

- Carefully unplug the battery power cable to disconnect the battery from the motherboard.

- ⓘ The third image shows what it should look like with the battery power cable is disconnected.
Step 6

- Begin by locating the double sided pull tape locations.

⚠ Do not lift on the battery when doing the following step. You will bend it. It is very pliable.

- Pull the black soft tabs to release the tape's adhesion.

ⓘ Make sure you pull the tabs slowly and continuously away from the case until the adhesive is completely out.

- Do this to all 4 tabs until the battery is completely free of adhesion to the device's backing.
Step 7

⚠ Make sure all the adhesive is removed before trying to lift the battery from the case.

- After the battery is totally free of any adhesion, simply lift the battery from the case.

Step 8

- Inspect battery for any leakage.

📌 Please follow all U.S. regulations and laws when disposing or recycling the battery.

To reassemble your device, follow these instructions in reverse order.
