

Shark Rocket HV301 Filter Replacement

This guide will teach you how to access and take out the filters in the Shark Rocket HV301.

Written By: Christian

INTRODUCTION

This repair guide allows for you to access the filters on the Shark Rocket HV301. Cleaning the filters, or replacing them with new ones, will improve suction and overall performance. There are no tools needed, as this guide is very simple and easy to do.

PARTS:

- [HV301 Filter](#) (1)
-

Step 1 — Filter

- Locate the orange filter lid on the front of the vacuum.
- Remove the orange filter lid by pulling on the tab that has "Clean Filter Monthly" written on it.

Step 2

- Remove the the outer and inner filters inside the vacuum by pulling them out.

Step 3

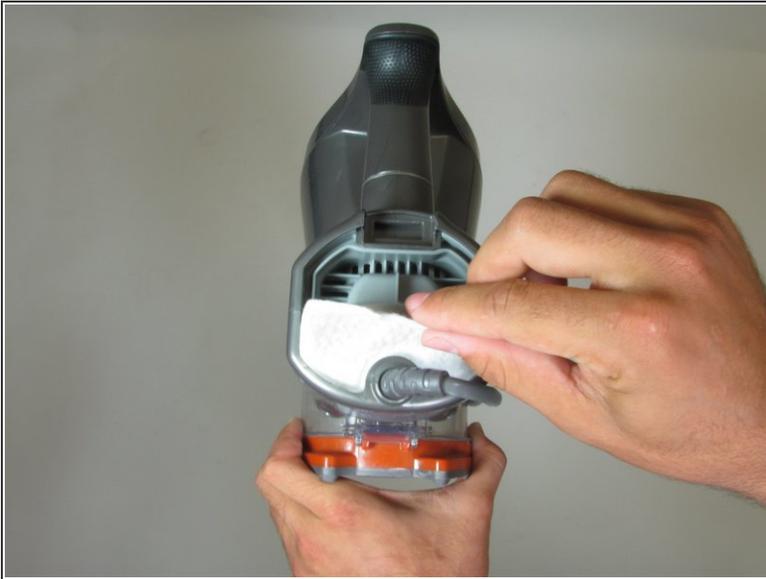

- Wash the filters by running tap water through them until clear unless you are buying new filters.
- Lay the filters out until they are completely dry.

Step 4

- Locate the motor filter lid on the top of the vacuum with the vacuum facing you.
- Remove the motor filter lid by pushing the release clip on the top and pulling towards you.

Step 5

- Pinch the tab on the motor filter to remove it from the vacuum.

To reassemble your device, follow these instructions in reverse order.
