

# Samsung Galaxy Tab E 9.6 Verizon Back Casing Replacement

This guide covers removing the back enclosure...

Written By: Dave Dorzback

# INTRODUCTION

This guide covers removing the back enclosure on the Samsung Galaxy Tab E.

---

## TOOLS:

[iFixit Opening Tool](#) (1)

[Suction Handle](#) (1)

---

## Step 1 — Back Casing

 Remove any micro-SD or SIM cards before continuing.

 Verify your device is turned OFF.

 Disconnect all external devices from your tablet.

## Step 2

- Insert the plastic opening tool by wedging it between the device's screen and back cover.
  - Move the plastic tool around the edges of the device to undo the plastic lips holding the casing together.
- i** This step may require more force than expected. If difficult, try using a suction cup on the screen.

## Step 3

- This process will become easier as more clips are separated.
  - Use your hands to gently pull the back cover off the device after about half of the clips are separated.
- A suction cup can be used in this step as well to assist in pulling the device apart.

To reassemble your device, follow these instructions in reverse order.
