

# Fujifilm FinePix 4700 Zoom Speaker Replacement

This guide will help you install and remove the speaker on the camera.

Written By: Lawrence Yang

# INTRODUCTION

In order to access the speakers, the back cover of the camera needs to first be removed and the lens needs to be taken out.

# **TOOLS:**

۶

- Phillips #00 Screwdriver (1)
- iFixit Opening Tools (1)
- Spudger (1)
- Tweezers (1)

#### Step 1 — Back Cover

- Use the Phillips #00 screwdriver to remove the 7 screws on the sides of the camera:
  - Four 3.95mm Phillips screws located on the bottom of the camera
  - Two 3.95mm Phillips screws located on the right side of the camera
  - One 3.95mm Phillips screw located on the left side of the camera

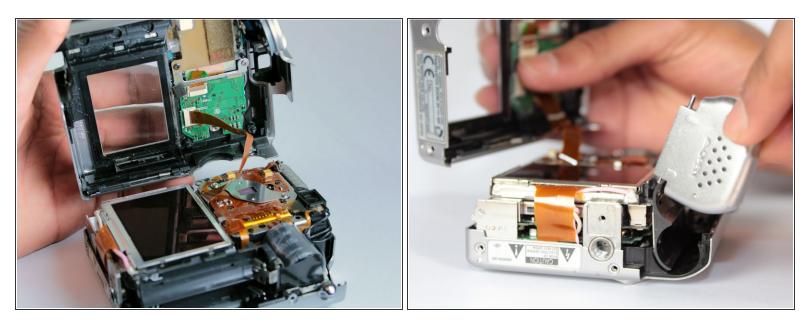

#### Step 2

 Slide open the battery compartment cover with your thumb.

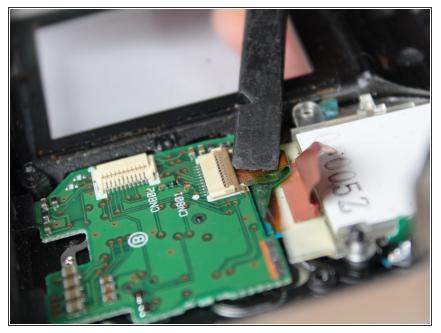

- Wedge the edge of the spudger between the front and back case, near the corner of the flash.
- Carefully run the spudger along the right edge of the camera, creating an opening.
- Insert the spudger into the left side of the camera, above the screwhole. Then carefully run it along this edge.

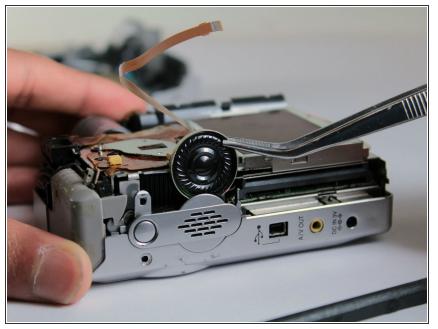

- Match out for the orange ribbon that is still attached to the back cover when you lift it up. It is very delicate and might rip.
- Slowly lift the back cover straight up, lightly jiggling it if necessary.
- Remove the battery compartment cover.

#### Step 5

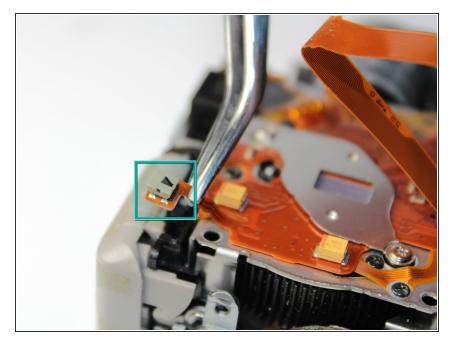

- Gently insert the spudger under the clip holding the orange ribbon. The clip should lift up and the ribbon will slide out.
- This step will free the back cover from the rest of the camera.

#### Step 6 — Motherboard Unit

- Pull gently when removing the speaker so you don't rip the wire attached to it.
- Use the tweezers to grab the speaker (located on left side of the camera) and pull straight up.
- (i) The speaker will still be connected to the motherboard, but it will not be attached to the front case.

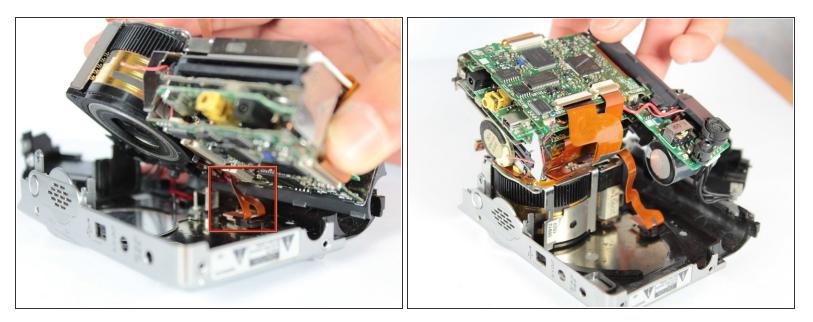

## Step 7

 Use the tweezers to pull gently on the small orange ribbon, located in upper left hand corner near the flash, to remove the square insert.

- Use your fingers to slowly pull the flash straight up.
- (i) The step may take a little jiggling.

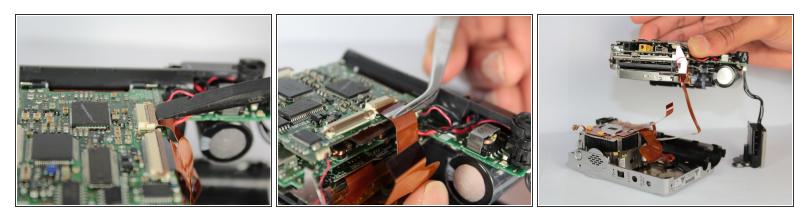

- Do not fully separate the motherboard unit from the front cover. There is still a ribbon attached and it will rip.
- Slightly separate the front cover from the motherboard unit (which consists of the motherboard, speaker, screen, and battery compartment).
- Rotate the bottom portion of the motherboard unit (the screen and battery compartment) over the lens unit.

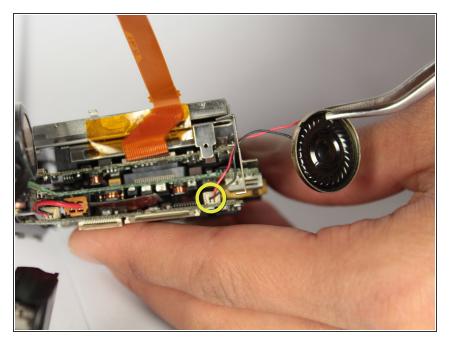

• Use your fingers to remove the tripod mount.

# Step 11

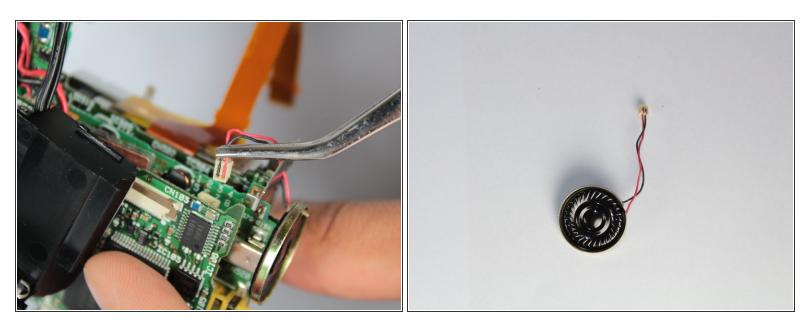

- A Be gentle when undoing the ribbon clips. They break easily.
- Gently stick the spudger under the ribbon clips and lift them up.
- Use the tweezers to pull both ribbons out of the ribbon clips.
- (i) The motherboard unit should now be free from the rest of the camera.

# Step 12 — Speaker

- Locate the wire running from the speaker unit to the motherboard.
- This is where the power plug for the speaker is located.

#### Step 13

- Use the tweezers to grab the speaker wires close to the motherboard.
- Pull speaker wire straight out.
- (i) The speaker should now be free from the rest of the camera.

To reassemble your device, follow these instructions in reverse order.
